# Recap

- Mi-Co surveyed partners in February, 2007 to help assess near-term priorities from a technological perspective
- 10 question survey asking to rank potential features from 1 to 9, with 1 being the most important, 9 being the least important

# Results

- Most “1”s – Add better support for certain advanced form controls - This may include the ability for the forms designer to create multi-line constrained text fields, multi-line checkbox captions, and better font support for dynamic labels.
- v6.1
  - Multi-line CText fields
  - Checkbox spacing settable at design time
  - Dynamic labels have better font support

# Results

- Most “2”s – Improve session display and processing on the Mi-Forms Server - This may include adding the ability to automatically retry data exports as well as providing more user-defined information when using workflow scenarios.
- v6.1
  - Custom Export failures shown in session history
  - Ability to set “process at” to retry processing

# Results

- Most “3”s – Improve support for dynamic data capture - This may include adding a grid control to display data in a form page as well as an API enhancement that would allow for the serialization of data classes in script with a minimum of developer effort.
- v6.1
  - Grid control allows for display of dynamic data and automatic data serialization

# Future Surveys

- Mi-Co will again survey partners in May with a potential feature list and ask for priorities
- We would like a higher response rate
  - Multiple responses from the same partner are fine if your organization has multiple needs

*And Finding the  
Solution*
