Mi-Forms Software in Clinical Settings

"The system conforms to the way our time-constrained professionals work. We've simply replaced pen and paper with digital ink and Tablet PCs. With this change, we're now in a position to collect an entire spectrum of data and deposit the data simultaneously in a clinical system or a national registry. At the Medical Center we can now even send images of forms to our Electronic Medical Record (EMR) System saving a number of steps in that process. It's like zapping your paper form right into the database."
